Work experience

GDI SOLUTIONS – JUNIOR SOFTWARE ENGINEER

April 2024 – Present [Java, Vue.js, ArcGIS API, Databases]
As a junior software engineer, I'm working on multiple web applications for viewing and manipulating GIS data.

MICROSOFT DEVELOPMENT CENTER SERBIA - INTERNSHIP

March 2022 – May 2022 [React.js, D3.js]
I was a part of the Maps team, and worked with them on the existing web application for modifying maps data.

Education

SCHOOL OF ELECTRICAL ENGINEERING UNIVERSITY OF BELGRADE

Software Engineering

2023 – Present
Master Academic Studies, took courses like Social Network Analysis, big data, cyber security etc.

Computer Engineering and Information Technology

2019 – 2023
Bachelor studies. A strong foundation in computer engineering, programming, and information technology.

FIRST GRAMMAR SCHOOL KRAGUJEVAC

2013 - 2019
I went to class for gifted students in Math and Science and finished it with honors.

Experience

STUDENT TEACHING ASSISTANT

2023 - 2024
Helping professors in organizing laboratory exercises by marking homework and evaluating younger students in a course of Artificial Intelligence.

EESTEC LC BELGRADE

2020 – 2024
Improving soft skills, organization and working in a team. Logistics team member for JobFair every year from 2020-2022. Volunteer at Data Science and AI conference – DSC Europe 23.

STUDENT DELEGATE

2021-2023
Represented the needs and wants of the students in my module, to academics and other university employees so that they can be fulfilled.

PETNICA SCIENCE CENTER

2017–2019
Worked on a few projects, Laser communication (published), Detecting lymphoblast cells from an image and classification and other smaller projects in IT and electronics.

Projects

Analysis of scientific production
2024 [Python]
Social network analysis of scientific production in the field of epidemiology and infectious diseases at the Faculty of Medicine, University of Belgrade.

Cake shop
2024 [Vue]
Web application for ordering sweets, at some cake shop. Focused on UI.

Spooky Author Identification
2024 [*Python*]
Natural language processing problem solved using machine learning algorithms, and neural networks.

Diabetes detection
2023 [*Python*]
I conducted a diabetes detection project using a database of 100,000 samples, addressing class imbalance with under-sampling and ADASYN techniques. Classification done using KNN, Logistic Regression, and Decision Trees.

Micro-Java Compiler
2023 [*Java*]
Made a simple compiler for Micro-Java. JFlex and Cup tools were used for implementing lexical and syntactic analysis.

Assembler, Emulator and Linker
2023 [*C++*]
Made system programing toolchain, in C++. For an abstract architecture.
That works on Linux.

Spacer shooter game
2023 [*Python*]
As I part of a team in hackathon, we made a hyper casual game in python. The theme of competition was choose one, so we had different weapons and enemies, to choose from.

Library MEAN web application
2022 [*TS-Angular*]
Web application for library users.
Made with MEAN framework and mongoose database.

Multi-threading kernel
2021-2022 [*C++*]
Thread management subsystem, with time-sharing, context switch, threads, and semaphores. For x86 CPU and RiscV architecture.

Skills

PROGRAMMING: Java, Vue, Python, C, C++, React, Angular, JavaScript, SQL, Oracle, PostgreSQL, VHDL
LANGUAGE: English, Serbian (native)

Communication

Through non-work experiences, I actively cultivated and enhanced my soft skills, particularly focusing on communication, teamwork, and mentorship. Engaging in various projects allowed me to develop effective collaboration within a team setting
